

# UTS secure – Vehicle protection

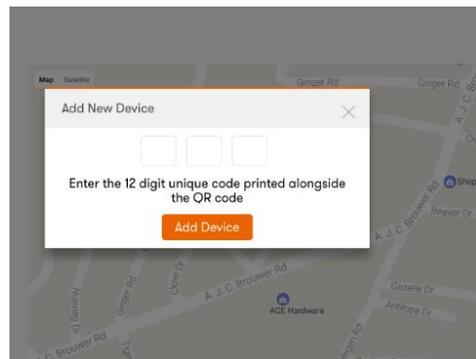

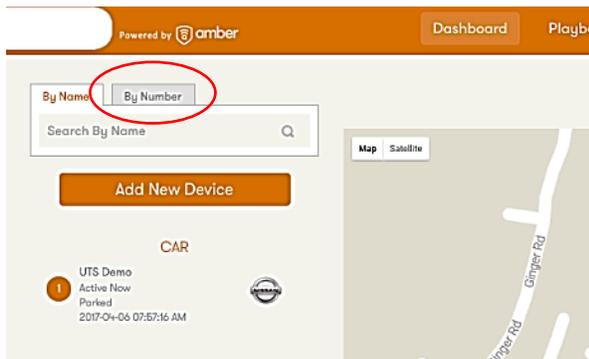

## User manual

### Step 1: Install your device

Visit your car dealer or preferred mechanic to have your device installed. Please provide them with the installation manual, making sure to insert the sim card into the device before having the device installed.

### Step 2: Create an account

Go to [www.amberconnect.com/portal/customer/login](http://www.amberconnect.com/portal/customer/login) to create your account. Once you've created your account, you can add one or more devices to it by entering the 12-digit unique code of your device. You will receive this code from your UTS sales representative. Be sure to keep this code private and do not share it with others.

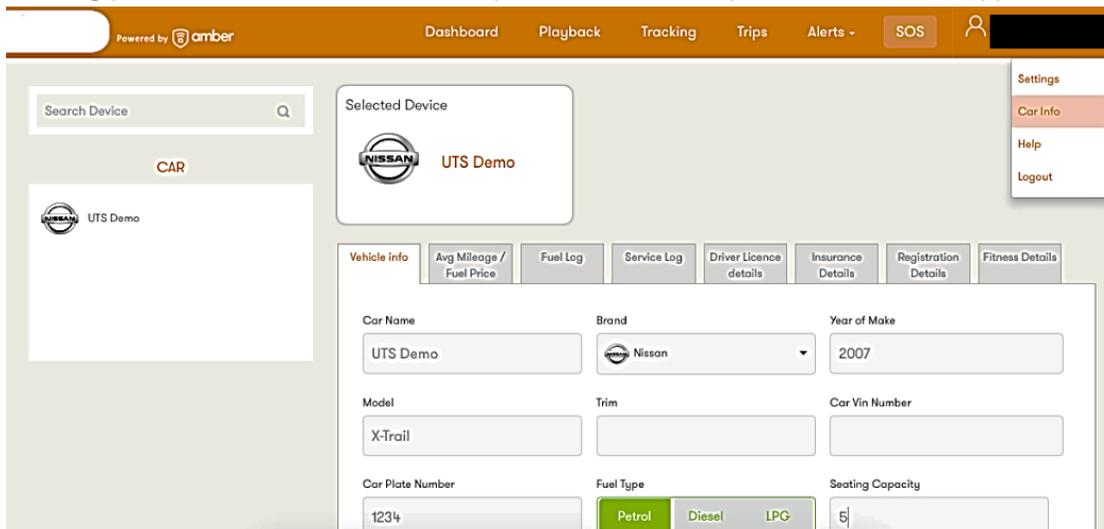

### Step 3: Get familiar with the portal

Below we explain how to use the UTS Secure portal. You can also watch our [UTS Secure demo video](#) on our [Youtube channel: UTS EC](#). The web portal allows you to track your vehicle, set alerts, monitor fuel usage, run reports and much more. We've included several portal screen shots below to help you familiarize with all the features.

### Car info

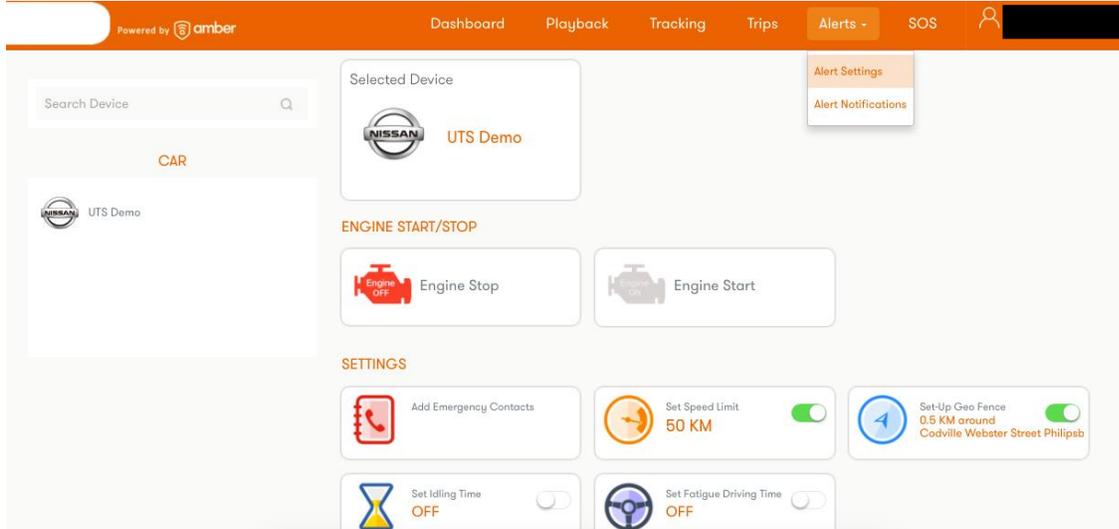

Enter all your vehicles information. This helps calculate accurate fuel consumption and helps track vehicle service intervals. You can also enter other information such as insurance details and registration details, allowing you to access this information anytime from the web portal or the mobile app.

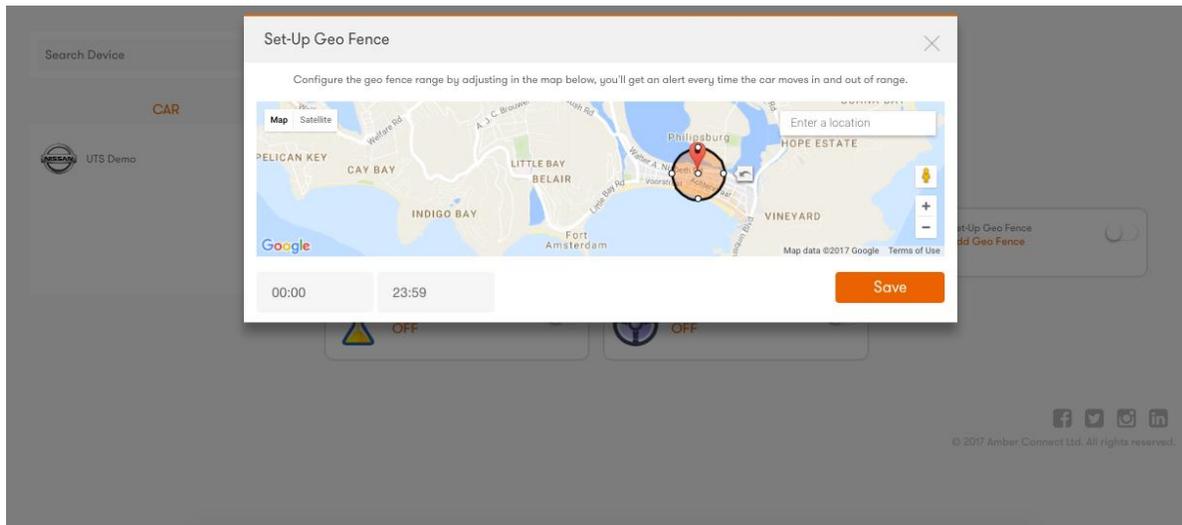

## Alert settings

Configure settings for the alerts you would like to receive such as speed limit violations, vehicle movements based on a geo fenced perimeter, idle time etc.

## Set-up Geo Fence

With geo-fencing you set up alerts for vehicle movements entering and exiting a designated, specific area that you set on the map. Set the geo fence range by adjusting in the map below. You will receive an alert every time the car enters or exits the designated area.

## Trips

The portal allows you to look back at trips from the last month, week or day. It gives you information on distance, time, speed, hard acceleration, hard brakes, mileage and more. You can also export trip reports which gives you a clear overview of all the trips your vehicle has made over a period of time.
